IST-2001- 39117 ADAMANT Project Airport Decision And Management NeTwork

Web site: <http://adamant.elec.qmul.ac.uk>

ADAMANT utilizes Intelligent Agents and Multiple Agent System as the basic platform, providing a set of value-added services for different users in an airport environment. The key objectives of ADAMANT are:

- To provide an intelligent, personalized, location-based information and decision support system for travellers and airport services.
- To provide management of the communication resources serving the particular location or route, under normal conditions and emergency situations.
- To create "roaming/location sensitive" SLA management framework.

ADAMANT Partners

NTUA / ICCS

Supported and partially funded by

European Commission
